

iTEC Wins Largest GIS Project in Malaysia

inControl Tech has successfully bagged the order for the "Implementation of Corporate GIS (CGIS) in TNB" A major initiative from TNB, this project seeks to integrate all asset information on GIS and to reengineer its business processes to take advantage of the power of GIS. iTEC has been chosen as the successful bidder for the System Integrator based on a very exhaustive tendering and evaluation process that lasted more than 6 months.

iTEC tendered for this project with its Partner, GE's Smallworld as the GIS platform. A total of 50 functions have been identified to be integrated through "System Oriented Architecture" the latest concept which eliminates the clutter of interface programs and provides a registry of all software services available throughout TNB.

Initially to be implemented in the Klang Valley region over the next four years, this initiative will then be expanded throughout Peninsular Malaysia in the further 6 years by TNB. This foundation project is the largest GIS initiative taken in the country, if not SE Asia, and would provide a benchmark for future GIS implementations.

The project would adhere to emerging world standards. iTEC with its partners, Infotech Enterprises, Australia, WorldGroup Consulting, Malaysia and Deloitte Consulting, Malaysia would be mobilising a team of more than 40 engineers and implement this project for TNB. The project office would be located at TNBs facility at Uniten, Bangi.
