

## PEA's Ambitious SCADA/DMS Project Reaches First Major Milestone

inCONTROL Tech has successfully completed the Factory Acceptance Test (FAT) for the first Data Acquisition and Control (DAC) Simulator to be delivered to PEA. This is the part of the seven SCADA/DMS control systems which were ordered from iTEC/PSI and will be used as Area Distribution Dispatching Center (ADDC) by Provincial Electricity Authority (PEA) throughout Thailand.

PSIControl EE Master System has been adopted as the main utility software used in the ADDC's for the PEA distribution systems in each region which includes the Northern Region, North Eastern Region and Southern Region Area.

These Systems will also be used along with the Data Acquisition and Control (DAC) Simulator which is integrated to be able to function with the Supervisory Control and Data Acquisition System (SCADA).
